

LUNCHTIME CONNECTIONS.

As a part of the new era of involving the public in defence matters, lunchtime connections will be on occasions, at public venues. This is the first of these events.

The event is partially sponsored by, and may be used as, an evaluation of possible catering contractors.

The speaker will be
Associate Professor of Herbadology
Dr P O'Dendron.
Dept of Herbaceous Behavioural Studies.
University of Southern Comfort
North Dakota.

ABSTRACT

The talk encompasses Dr O'Dendron's research into paradigms of stress relationships in today's workforce.

The particular field of asymmetric accolade and farewell emotional fusion putatively present at employment termination functions has been a primary field of interest

The question of whether the stresses of organising such functions can create individually focussed stress, which may then propagate as a further employment discontinuity is considered.

The proposition that exceeding a determinable level of events may cause the departure celebration system to become self-sustaining will be discussed. .

Much of the remaining talk will focus on Phil's work with complex predictive models in the urban workplaceal which will be illustrated with some fascinating Power Point presentations where all 412 known fonts (as well as 4 custom fonts) are used many of them in a single sentence so it is further probable that with the inclusion of some possibly gratuitous and incontrovertibly speculative allusions to predictive computer algorithms combined with a desire for an achievable outcome within a modest time frame in total could result in a sentence of such extreme length that vocalisation without pause for normal asparative procedures could be hazardous.

Phil will also show you his Matlab tattoo.

A light lunch will be served*

Some sponsor corporate products will be available on site.

THE TIME

WEDNESDAY 31 June 12:00

THE PLACE

The Ronald Macdonald Kiddie area.

Macdonald's Park Tce Salisbury.
